EBP metrics summary and curation notes

Obtained EBP quality metric for collapsed: 7.7.Q67

The following metrics were automatically flagged as below EBP recommended standards or different from expected:

- . Observed Haploid Number is different from Expected
- . Kmer completeness value is less than 90 for collapsed

Curator notes

. Interventions/Gb: 31
. Contamination notes: ""
. Other observations: "The assembly of Morimus orientalis (icMorOriel) is based on 55X PacBio data and Arima Hi-C data generated as part of the European Reference Genome Atlas (ERGA, <https://www.erga-biodiversity.eu/>) via the Biodiversity Genomics Europe project (BGE, <https://biodiversitygenomics.eu/>).The assembly process included the following steps: initial PacBio assembly generation with Hifiiasm, removal of contaminant sequences using Context, removal of haplotypic duplications using purge_dups, and Hi-C-based scaffolding with YaHS. In total, 24 contigs were identified as contaminants (bacterial, archaeal, or viral), totaling 3.6 Mb (with the largest being 1.5Mb). Additionally, 358 regions totaling 36 Mb (with the largest being 3.5 Mb) were identified as haplotypic duplications and removed. The mitochondrial genome was assembled using OATK. Finally, the primary assembly was analyzed and manually improved using Pretext. During manual curation, no haplotypic regions were removed. Chromosome-scale scaffolds confirmed by Hi-C data were named in order of size. The coverage in long read sequencing of the scaffold 12 is 2 fold lower than other scaffolds. "
